Art Unit: 2855

DETAILED ACTION

Drawings

1. The drawings are objected to because reference numbers should be included to refer to elements of the invention outlined in the specification. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification.

2. The disclosure is objected to because of the following informalities: reference numbers should be listed to refer to elements of the invention; and the brief description of the drawings should include an explanation of the view shown. Appropriate correction is required.

Claim Objections

3. Claims 1-9 are objected to because of the following informalities: The claims do not comply with current USPTO form. Particularly, the claims fail to include the necessary transitional phrase, such as "comprising" or "including", that indicate the necessary elements of the claim. The claims also fail to indicate which claim they depend from. It is also incorrect form to include the phrase "What I claim as my invention" in the body of the claim. Appropriate correction is required.

Claim Rejections - 35 USC § 112

- 4. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 5. Claims 1-9 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

Application/Control Number: 10/614,173

Art Unit: 2855

A. The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 7. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Parker (US 4,474,061).
- A. With respect to Claim 1, Parker (US 4,474,061) discloses a process by which the volume within air tight container 10 can be determined using electronic gas mass flow technology (column 2, lines 33-68; column 4, lines 8-44).
- B. With respect to Claims 2, Parker (US 4,474,061) discloses the use of regulated pressurized (compressed) air (column 3, lines 5-8).
- C. With respect to Claims 3, Parker (US 4,474,061) discloses the use of regulated pressurized (compressed) gas for specialty requirements such as fuel tanks 10.
- D. With respect to Claims 4, Parker (US 4,474,061) discloses the use of atmospheric (trapped) air entering the tank 12 (column 2, lines 40-42).

Art Unit: 2855

E. With respect to Claims 5, Parker (US 4,474,061) discloses the use of air 36 being drawn through the sensor with vacuum to determine volume (column 3, lines 12-35).

Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 6-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Parker (US 4,474,061) in view of Locatelli (US 6,497,139).
- 10. With respect to Claim 6, Parker (US 4,474,061) discloses the claimed invention, except he does not explicitly disclose changing sensor size. However, changing the sensor size or shape would be an obvious design choice in order to make the sensor fit a particular container. (See MPEP §2144.04). Therefore, it would have been obvious to one of ordinary skill in the art to include in Parker (US 4,474,061) changing the sensor size for the purpose of fitting varying size containers.
- 11. With respect to Claims 7 and 8, Parker (US 4,474,061) discloses the claimed invention, except he does not explicitly disclose using partial pressure or vacuum. It is well-known by those of ordinary skill in the art of flow/volume measurement to utilize partial pressure or vacuum in order to manipulate flow characteristics. (See MPEP § 2144.03). Therefore, it would have been obvious to one of ordinary skill in the art to include in Parker (US 4,474,061) the use of partial pressure or vacuum to manipulate flow characteristics.

, ,

12. With respect to Claim 9, Parker (US 4,474,061) discloses the claimed invention, except he does not explicitly disclose locating leaks with water and soap solution. However, it is notoriously well-known to use a soap and water solution in order to locate a leak on a pressurized container. Therefore, it would have been obvious to one of ordinary skill in the art to include in Parker (US 4,474,061) the use a soap and water solution in order to locate a leak on a pressurized container.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Corey D. Mack whose telephone number is (571) 272-2181. The examiner can normally be reached on M-F, 8:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Lefkowitz can be reached on (571) 272-2180. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
